Table 1. Codex, GPT-Neo, & TabNine evaluations for HumanEval. We find that GPT-J pass@1 is between Codex-85M and Codex-300M performance.

|              |        | PASS@ $k$ |         |
|--------------|--------|-----------|---------|
|              | k = 1  | k = 10    | k = 100 |
| GPT-NEO 125M | 0.75%  | 1.88%     | 2.97%   |
| GPT-NEO 1.3B | 4.79%  | 7.47%     | 16.30%  |
| GPT-NEO 2.7B | 6.41%  | 11.27%    | 21.37%  |
| GPT-J 6B     | 11.62% | 15.74%    | 27.74%  |
| TABNINE      | 2.58%  | 4.35%     | 7.59%   |
| CODEX-12M    | 2.00%  | 3.62%     | 8.58%   |
| CODEX-25M    | 3.21%  | 7.1%      | 12.89%  |
| CODEX-42M    | 5.06%  | 8.8%      | 15.55%  |
| CODEX-85M    | 8.22%  | 12.81%    | 22.4%   |
| CODEX-300M   | 13.17% | 20.37%    | 36.27%  |
| CODEX-679M   | 16.22% | 25.7%     | 40.95%  |
| CODEX-2.5B   | 21.36% | 35.42%    | 59.5%   |
| CODEX-12B    | 28.81% | 46.81%    | 72.31%  |

#### Perform good on the benchmark

Information Systems

Vaithilingam, Priyan, Tianyi Zhang, and Elena L. Glassman. "Expectation vs. experience: Evaluating the usability of code generation tools powered by large language models." In *Chi conference on human factors in computing systems extended abstracts*, pp. 1-7. 2022.

### 1. Expectation vs. Experience

#### Problem

AI coding assistants' real-world usability and how they fit into a developer's workflow.

#### Method

- User study (N=24) comparing Copilot vs. VS Code's IntelliSense across three Python tasks (easy/medium/hard).
- Measured task success, completion time, and subjective preferences.

### 1. Expectation vs. Experience – Key Findings

No significant boost in completion time or success rate with Copilot vs. IntelliSense.

#### Strong preference for Copilot (19/24), because it:

- Provides a useful "jump-start" snippet instead of a blank editor
- Cuts down on web searches for boilerplate code

#### **Usability hurdles** hinder effectiveness:

- Difficult to understand, debug, and edit large AIgenerated code blocks
- Cognitive overload when navigating multi-line suggestions

### 2. Evidence from GitHub Copilot

#### The Impact of AI on Developer Productivity: Evidence from GitHub Copilot

### 3. Grounded Copilot

# Grounded Copilot: How Programmers Interact with Code-Generating Models

SHRADDHA BARKE\*, UC San Diego, USA MICHAEL B. JAMES\*, UC San Diego, USA NADIA POLIKARPOVA, UC San Diego, USA

OOPSLA 2023 Citations: 458

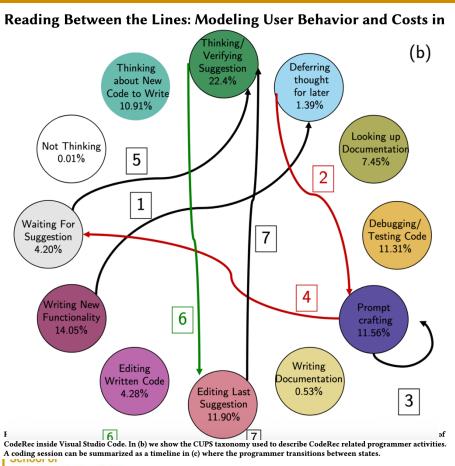

**Interactions** with programming assistants are bimodal:

In acceleration mode, the programmer knows what to do next and uses Copilot to get there faster; In exploration mode, the programmer is unsure how to proceed and uses Copilot to explore their options.

School of
Computing and
Information Systems

Barke, Shraddha, Michael B. James, and Nadia Polikarpova. "Grounded copilot: How programmers interact with code-generating models." *Proceedings of the ACM on Programmin Languages* 7, no. OOPSLA1 (2023): 85-111.

### 4. Reading Between the Lines

#### Goals

Introduce and validate CUPS (CodeRec User Programming States), a fine-grained taxonomy and behavioral model of how developers interact with AI code recommendation tools (e.g., Copilot).

#### **Method**

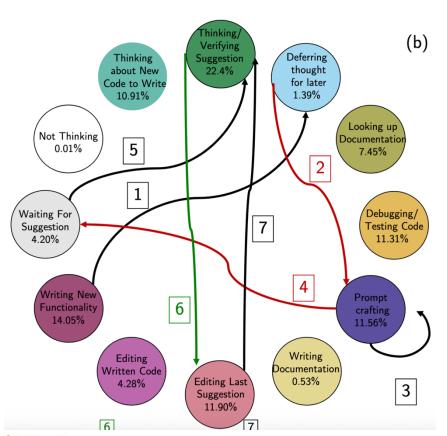

**Grounded-theory labeling**: 21 programmers retroactively annotate 3,137 "telemetry segments" of their real Copilot sessions

**CUPS taxonomy** defines 12 states (e.g., *Prompt Crafting, Verifying Suggestion, Writing New* 

Computing and Information Systems CHI

CHI 2024 Citations: 147 Functionality)

# 4. Reading Between the Lines – Key Findings

#### **Verification dominates:**

"Thinking/Verifying Suggestion" alone consumes **22.4%** of session time

Half the session (51.5%) was spent in Copilot-specific states (prompting, deferring, waiting, editing suggestions)

**Deferred verification** is common: many acceptances are immediately followed by post-accept reviews, inflating true acceptance costs

School of
Computing and
Information Systems

Mozannar, Hussein, Gagan Bansal, Adam Fourney, and Eric Horvitz. "Reading between the lines: Modeling user behavior and costs in AI-assisted programming." In *Proceedings of the 2024 CHI Conference on Human Factors in Computing Systems*, pp. 1-16. 2024.

# 5. A Large-Scale Survey

#### A Large-Scale Survey on the Usability of Al Programming **Assistants: Successes and Challenges**

Jenny T. Liang Carnegie Mellon University Pittsburgh, PA, USA jtliang@cs.cmu.edu

Chenyang Yang Carnegie Mellon University Pittsburgh, PA, USA cyang3@cs.cmu.edu

Brad A. Myers Carnegie Mellon University Pittsburgh, PA, USA bam@cs.cmu.edu

**ICSE 24** Citations: 197

#### **Core Goal**

Understand, at scale, why developers choose (or avoid) AI programming assistants and what usability challenges they face

#### Method

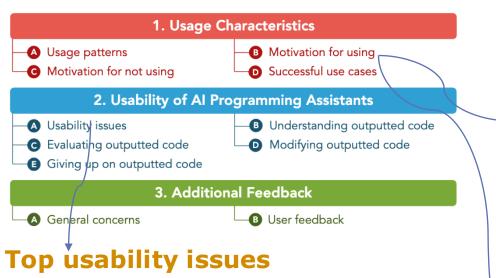

Surveyed **410** real-world developers across Copilot, Tabnine, ChatGPT, CodeWhisperer, etc., combining quantitative rankings and open-ended feedback

School of Computing and

Liang, Jenny T., Chenyang Yang, and Brad A. Myers. "A large-scale survey on the usability of ai programming assistants: Successes and challenges." In Proceedings of the 46th Information Systems IEEE/ACM international conference on software engineering, pp. 1-13. 2024.

# 5. A Large-Scale Survey – Key Findings

- What input led to this suggestion? (30% often)
- **Giving up and rewriting** toolgenerated code (28%)
- Code generation tool's suggestions are too distracting (23% often)

#### Motivation for using

- **Autocomplete & keystroke** reduction (86%)
- **Speed up tasks** (76%)
- Recall syntax without web **search** (68%)

#### **Motivation for not using:**

- Generated code fails to meet requirements (54%)
- Hard to **control** what the tool outputs (48%)

Liang, Jenny T., Chenyang Yang, and Brad A. Myers. "A large-scale survey on the usability of ai programming assistants: Successes and challenges." In Proceedings of the 46th Information Systems IEEE/ACM international conference on software engineering, pp. 1-13. 2024.

# 6. Using Al-based coding assistants in practice

Using AI-based coding assistants in practice: State of affairs, perceptions, and ways forward

Agnia Sergeyuk <sup>a,1</sup>, Yaroslav Golubev <sup>a,\*,1</sup>, Timofey Bryksin <sup>b</sup>, Iftekhar Ahmed <sup>c</sup>

#### **Core Goal**

Conduct a **large-scale survey** (N = 481) to map exactly **where**, **how**, and **why** developers use (or avoid) AI coding assistants across the full software development lifecycle

#### Maerk Fyraclitricities and their stages:

th preprentition exemples is the writing enjoyable burd the least (it elle to the writing assistant and writing natural-language artifacts are the most unpleasant and the most likely to be delegated.

66,053

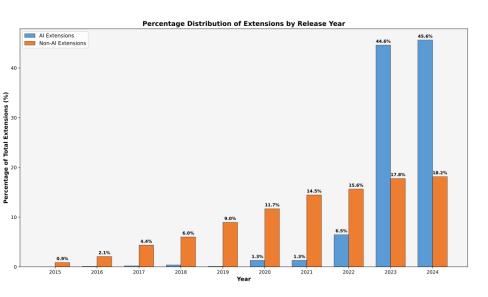

1,962

1,085

# **VS Code AI Coding Assistants**

AI extensions have seen rapid growth in recent years

1.64% of all extensions on the VS Code Marketplace

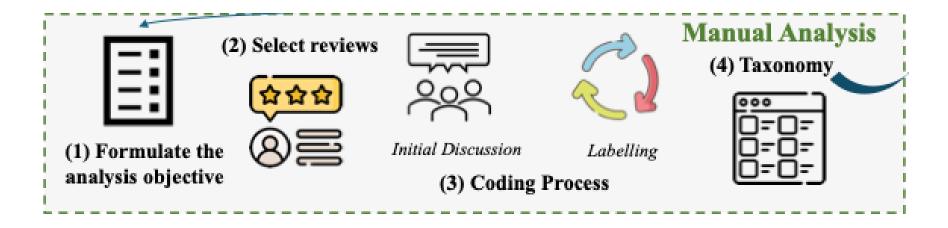

AI extensions receive significantly more feedback, with an average of 7.48 ratings per extension compared to 1.76 for non-AI extensions

Both AI and non-AI extensions show similar inequality in installs and ratings: The top 10 most-installed AI extensions account for 86% of total installs, and the top 30 most-rated receive 75% of all user ratings

# Labeling Taxonomy

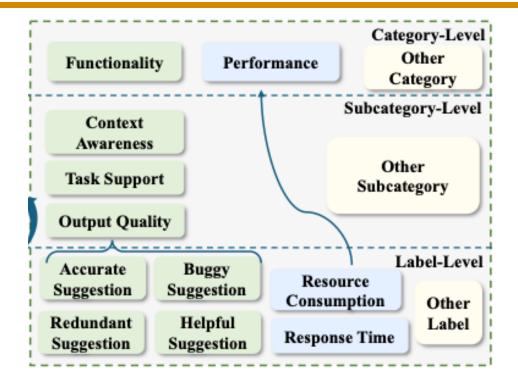

Sampled **361** user reviews from **32** popular assistants.

#### Conduct a **Hybrid card sorting**:

- Started with five predefined top-level categories
- Then use bottom-up consolidation
- Iterative Coding

# Labeling Taxonomy

Developed a 3-level taxonomy (8 categories, 16 subcategories, 62 labels).

# **Taxonomy**

| ID | Category-Subcategory                             | Description   | No. | Rate  | Sentiment |     |      |
|----|--|---|-----|-------|-----------|-----|------|

School of Computing and Information Systems

#### 1. Productivity Boost is Real—but Not Universal

- Most users report productivity gains, especially novices.
- Experienced developers are more critical.

"not having to type every single repetitive function out or imports" (R94,  $5 \approx$ ).

"I am a beginner programmer, and it is helping me a lot to build a project" (R319, 5%).

"For anyone who really knows how to code, save yourself a lot of frustration" (R14,  $1 \approx$ ).

#### 2. Suggestion Quality is the Top Concern

- Accurate suggestions are highly valued.
- Users dislike redundancy, incompleteness, and buggy outputs.

"80% less keyboard touching. Autocomplete is pure magic. Feels like it's connected directly to your mind" (R164,  $5 \approx$ ).

"Constantly barfs words on the screen, 90+% is repetitive." (R14,  $1 \approx$ )

"it only predicts one character for me" (R34,  $1 \approx$ ).

#### 3. Context Awareness is a Major Weakness

 Assistants can interpret code but struggle to fetch or retain context, especially at the Repository level.

"[assistant] still doesn't see the class definitions in files that aren't open" (R1,  $1 \approx$ ).

"[assistant] forgets context on next question and answers irrelevantly even for simple questions" (R22,  $1 \approx$ ).

#### 4. Usability Matters

Poor onboarding and intrusive interface elements can deter users.

"Setup process is bloated. I'll wait until they make the process more streamlined." (R265,  $1 \approx$ ).

"While [assistant] aims to simplify coding, some users might find it challenging to adapt to the AI's suggestions and functionality, especially if they're used to traditional coding practices." (R240,  $4 \approx$ ).

"Annoyed suggestions show up at the top", "Focus doesn't work, making chat useless...frustrated, don't use this extension." (R312,  $1 \approx$ ).

"Messed so much with my code" (R7,  $3 \approx$ ).

#### 5. Resource Consumption is a Pain Point

 Users appreciate fast response time but complain about high CPU/memory usage.

Uses too many resources—over 50% CPU and more than 1 GB memory" (R125,  $1 \approx$ ).

"The extension's performance can sometimes slow down the editor, especially when working on larger files or multi-projects" (R306,  $5 \approx$ ).

#### 6. Pricing and Ethics Influence Adoption

 Users prefer free tools and criticize the monetization of opensource trained models.

"It's a wonderful free alternative of paid AI code assistants"

"Was cool to try out but too expensive now. You are using our code to make money. So, pass for now...but I think you should have a free version (since it's using open source)" (R42, 1 ).
